Reporting Tools

NOAA IncidentNews

This site has news, photos, and other information about selected oil spills (and other incidents) where NOAA's Office of Response and Restoration (OR&R) provided scientific support for the incident response. It contains information on thousands of historical incidents spanning 30 years of OR&R spill response. <http://incidentnews.noaa.gov/>

Environmental Response Management Application (ERMA)

This is an online mapping tool from the NOAA Office of Response and Restoration integrates static and real-time environmental data with response information for decision makers. There are separate ERMA tools for the Deepwater Horizon Gulf Response, the Gulf of Mexico, and the Arctic, among other regions. <http://response.restoration.noaa.gov/maps-and-spatial-data/environmental-response-management-application-erma>
